ACACIA ARABICA

Acacia Arabica is a hardy and drought-tolerant evergreen tree valued for its dense green foliage, natural shade, and adaptability to various climatic conditions. Known for its strong structure and low maintenance requirements, it is widely used in landscaping, avenue plantations, parks, and gardens. This eco-friendly tree also helps improve soil fertility through natural nitrogen fixation, making it an excellent choice for sustainable and attractive green spaces.

CACTUS ERYTHREA

Cactus erythrea, commonly known as Euphorbia erythraea or the African milk tree, is a tall, columnar succulent species native to arid regions of northeastern Africa. Despite its cactus-like appearance, it belongs to the Euphorbia genus, not the Cactaceae family. It is valued for its architectural shape, drought tolerance, and use in xeriscaping.

BALL CACTUS

Known for their charmingly symmetrical shape, these spherical "cactus balls" add a unique architectural touch to any sunny space. Their dense clusters of golden or silver spines create a glowing, textured appearance that is both hardy and soft to the eye. Thriving on minimal water and bright light, these resilient globes are the perfect low-maintenance choice for busy plant lovers. In the warmer months, they often surprise with a vibrant crown of silky, funnel-shaped blooms.
